

APLICA Epo Clean

SOLVENT MIXTURE BASED CLEANER

Application on
floors and walls

High efficiency

Removing epoxy
resin residue

Universal acid-based
cleaner

DESCRIPTION

Aplica Epo Clean is an acid-based chemical cleaner, specially formulated with a combination of carefully selected acids, making it the ideal product for removing epoxy resin residue, cement residue, limescale deposits, rust residue, and other dirt.

APPLICATIONS

Removes epoxy resin residue from floors and walls. Due to its cleaning action, it effectively removes residue and stains from ceramic, porcelain stoneware, and glass mosaic surfaces. A preliminary test is recommended. A preliminary test is required for use with marble and natural stone. Its use is also indicated for descaling salts in water supply systems. It removes limescale deposits that form on boiler tubes, heat exchangers, water pipes, industrial washing machines, condensers, cooling towers, and electric and gas water heaters.

It also works by removing rust from metal surfaces that will subsequently need to be protected. Thanks to the inclusion of surfactants, passivating agents, and corrosion inhibitors in its composition, it can be used on ferrous metal and steel surfaces without being compromised by possible chemical attacks during cleaning. In construction, it removes annoying cement residues when cleaning concrete mixers, formwork sheets, and floors in newly constructed buildings. It is an acidic product suitable for use in the food industry.

HOW TO USE

Before starting descaling, it is advisable to reduce the amount of water in the system to a minimum. It is recommended to work in recirculation mode, although descaling can also be performed in static mode. It is important to thoroughly rinse after cleaning and avoid leaving any residue. It is important to consider the possibility that the treated metal surface may have pitting, in which case, cleaning should not be carried out in depth. In the case of soft metals, a prior study must be conducted regarding both product concentration and exposure times. It is used dissolved in water, the dosage depending on the application and the severity of the problem to be eliminated, keeping in mind that in no case should it exceed 25% of the product. It is non-combustible and can be heated to accelerate its action, up to temperatures no higher than 70°C.

APLICA Epo Clean

Rev - 08/2025

Once the chemical cleaning is complete, it is necessary to thoroughly rinse with plenty of water to remove any remaining dirt and product, especially in drinking water supply lines. It is also advisable to check the pH to reduce the effective amount of damage to the system so that the treatment is limited to the minimum necessary time. Mix thoroughly before use by shaking the bottle. The application depends on the severity of the problem to be eliminated, keeping in mind that in no case should the amount exceed 25% of the product. PACKAGING

aplica Epo Clean is presented in 1-liter bottles, with a shelf life of 12 months, under normal temperature and humidity conditions.

PRECAUTIONS AND RECOMMENDATIONS

Acidic product. R34: Causes burns. R37: Irritates respiratory system. S26: In case of contact with eyes, rinse immediately with plenty of water and seek medical advice. S36/37/39: Wear suitable protective clothing and gloves, eye protection, and face protection. S45: In case of accident or if you feel unwell, seek medical advice immediately (show the label, if possible). S46: If swallowed, seek medical advice immediately and show the label.

KEEP OUT OF REACH OF CHILDREN. DO NOT SWALLOW. For soft metals, testing is recommended. Store in a cool, dry place away from sources of light and heat.

**IN CASE OF ACCIDENT, CONSULT THE POISON MEDICAL INFORMATION SERVICE:
Telephone 91 562 04 20.**

TECHNICAL CHARACTERISTICS

Appearance	Dark violet fluid
Odor	Characteristic acidic
pH	1 ± 0.5
Density	1.21 ± 0.10 g/ml.
Solubility	Completely soluble in water

NOTE

The recommendations for use are based on our knowledge and experience. The technical data were obtained under normal laboratory conditions and may vary depending on the actual application conditions. Since application conditions are beyond our control, the company assumes no liability for the information in this sheet.
